

Assessment: Circle the Blocks

1 Overview

This guide outlines how to assess students' understanding of the programming blocks in the ScratchJr iPad app. This assessment was originally designed to evaluate student learning in K-2 classrooms after finishing the ScratchJr "Animated Genres" curriculum (http://www.scratchjr.org/teach.html#animated-genres), but the method could be adapted to any ScratchJr curriculum.

2 Setting Up

To conduct this assessment, you will need the following:

- an iPad with ScratchJr installed
- a projector, preferably with a "blank screen" capability, to display the iPad's screen
- each "Solve-It" project pre-programmed on the iPad (see below)
- a "Circle the Blocks" handout for each student
- a writing utensil for each student

Make sure you know how to run and re-run all of the Solve-Its in Presentation Mode (tap the "Presentation Mode" icon; tap the first page on the multi-page Solve-It to return to the first page.)

3 The Assessment

Students view a ScratchJr project as it runs in "Presentation Mode" (so that they cannot see the blocks), and they identify which blocks they think are part of the project's program by circling the blocks on the handout. The order of the blocks does not matter in this assessment.

Before beginning the assessment, instruct the students as follows:

- 1. Write your name clearly at the top of the page.
- 2. We will show you a ScratchJr project, and you will need to circle the blocks that you think were used to make the project.
- 3. You do not need to fill in numbers for the blocks or words for the "Say" block. Just circle the block.
- 4. The time we give for each project will be limited. When we go on to the next project, turn your full attention to it or you will miss it. Do not try to finish up the previous project.
- 5. All answers should be your own. Do not look at anyone else's paper.

4 Running the Assessment

For each of the seven "Solve-Its" do the following:

- 1. Announce the number of the "Solve-It" so the students know which part of the handout they should be circling.
- 2. Display the project in "Presentation Mode." Note: do not display the project on the projector's screen until you have put the project in Presentation Mode so that the students do not see the blocks that are being used in the project. If you have a projector with a "blank" button, you can blank the screen until you are ready. Otherwise, block the projector's lens from displaying on the screen or disconnect the iPad from the projector until you have put the project in Presentation Mode.

Assessment: Circle the Blocks

- 3. Make sure the class sees how you start running the program (whether by tapping a character or by tapping the green flag).
- 4. Re-run the program 2 more times so that the students get to see it run a total of three times.
 - If the "Solve-It" is rated "Easy" wait 30 seconds between each run. Wait 1 minute for "Medium"
 "Solve-Its" and 2 minutes for "Hard "Solve-Its."
 - If the program starts with a green flag, the characters will reset themselves to their original positions when the green flag is tapped. If the program starts by tapping a character, you will have to tap the green flag first in order to have all of the characters return to their original positions. Make sure the class knows that the green flag is not part of the program in that caseit is only being used to return the characters to their starting positions (or, press the green flag while the iPad is not being projected on the screen).
- 5. At the end of the assessment collect the handouts. Note: Students may omit the red "End" block except in the following cases:
 - where it leads to another page
 - where it causes the program to repeat infinitely.

5 The Solve-It Programs

1. Disappear, Then Reappear

This is a warm-up exercise to let the students become familiar with the "Circle the Blocks" activity. Review the answer when you are finished with this Solve-It to make sure the students understand what they need to do for the remaining Solve-Its.

Difficulty: Easy

2. Hop Twice, Wait, Hop Again

Difficulty: Easy

3. Turn Right and Left, Go Up and Down

Difficulty: Medium

Assessment: Circle the Blocks

4. Walk, then Run

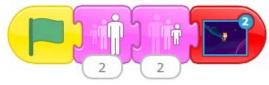

Note: manually move cat to left side of stage before you program it.

Difficulty: Medium

5. Grow, Shrink, then Go To Outer Space

Difficulty: Medium

6. When Cat Touches Dog, Dog Disappears

Difficulty: Hard Cat Program:

Dog Program:

7. Cat says "Do this" and Dances; Dog says "OK" and Mimics the Dance

Difficulty: Hard Cat Program:

Dog Program:
